PCT/US 07/15731

Box No. V Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	1-26	YES
	Claims	27-28	NO
Inventive step (IS)	Claims	None	YES
	Claims	1-28	NO
Industrial applicability (IA)	Claims	1-28	YES
	Claims	None	NO

2. Citations and explanations:

Claims 27-28 lack novelty under PCT Article 33(2) as being anticipated by US 2006/0101425 A1 to Donovan et al. (hereafter 'Donovan').

Regarding claim 27, Donovan teaches a method for securing data used in a transaction, comprising: a) scanning said data from at least one source file (para [0033]-[0036]); b) parsing said data in accordance with a template (para [0035]-[0037]; para [0043]-[0045]); and c) generating executable code utilizing said parsed data, wherein: said executable code is executable without accessing said source file to receive one or more parameters related to a transaction, and to provide an output required to complete said transaction (para [0035]-[0037]; para [0043]-[0045]).

Regarding claim 28, Donovan teaches a method for securing data provided to a user, comprising: a) scanning said data from at least one source file (para [0033]-[0036]); b) parsing said data in accordance with a template (para [0035]-[0037]; para [0043]-[0045]); and c) generating executable code utilizing said parsed data, wherein: said executable code is executable without accessing said source file to receive one or more parameters related to a transaction, and to provide said data to a user (para [0035]-[0037]; para [0043]-[0045]).

Claims 1-26 lack an inventive step under PCT Article 33(3) as being obvious over Donovan in view of US 2004/0254808 A1 to Bennett et al. (hereafter 'Bennett').

Regarding claims 1 and 19, Donovan teaches a system and method for converting data into executable code, said system comprising: one or more applications, wherein said one or more applications are configured to perform the steps of (para [0038]-[0039]; para [0081]): a) scanning said data from at least one source file (para [0033]-[0036]); b) after scanning said data from said source file, parsing said data in accordance with a template (para [0035]-[0037]; para [0043]-[0045]); and c) utilizing said parsed data to generate said executable code wherein, said executable code is executable, without accessing said source file (para [0035]-[0037]; para [0043]-[0045]). Donovan does not teach the source file contain data used for shipment rate calculations. However, Bennett teaches a source file contain data used for shipment rate calculations (para [0149]-[0155]; para [0185]-[0191]; para [0281]-[0285]); receive one or more parameters related to a shipment, and provide said data for said shipment (para [0103]-[0105]; para [0154]-[0158]; para [0306]-[0309]). It would have been obvious to one of ordinary skilled in the art to combine the teachings of Donovan with the shipment data file taught by Bennett and develop a system that could scan the shipment data file and generate an executable code for receiving one or more parameters related to a shipment and provide said data for said shipment, since it provides an automated shipment management system, thus providing a commercial real-world use for Donovan.

Regarding claim 2, Donovan teaches the source file comprises at least one attribute block that includes one or more data definition attributes (para [0041]-[0045]).

Regarding claim 3, Donovan teaches the data comprises at least one line of delimited values as defined by said attribute block (para [0047]-[0049]).

Regarding claim 4, Bennett teaches the data comprises at least one delivery zone chart (para [0297]-[0300]); and said attribute blocks comprise: (a) a chart name (para [0355]-[0357]); (b) an indicator of whether said data is domestic or international (para [0304]-[0308]); (c) an origin country of said shipment (para [0232]-[0233]); (d) a service for said data (para [0171]-[0172]); (d) a layout of said data (para [0249]-[0250]); (e) an origin postal code that said data applies to (para [0232]-[0233]; and (f) an effective date for said data (para [0214]-[0220]).

Regarding claim 5, Bennett teaches the data comprises at least one rate chart (para [0205]-[0210]); and said attribute blocks comprise a chart name, an effective date for said data, header information, and prefix information (para [0214]-[0220]; para [0355]-[0357]).
